

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application and is provided herein for the Examiner's convenience. No claims are amended hereby.

Listing of Claims:

- B1
1. (original): A method of representing source content to allow for flexible access comprising:
receiving source content;
determining one or more categories for said source content; and
extracting one or more notes from said source content, said one or more notes assigned to one or more categories.
 2. (original): The method according to claim 1 further comprising:
making said notes available for user access over at least two different user interfaces.
 3. (original): The method according to claim 1 further comprising:
presenting a portion of said notes to a user; and
providing control indications allowing a user to selectively access one or more unrepresented notes.
 4. (original): The method according to claim 1 further comprising:
formatting said presenting for an access device according to one or more templates.
 5. (original): The method according to claim 4 further comprising:
formatting said presenting for a display device, so that more notes are displayed on larger display areas and fewer notes are displayed on smaller display areas; and
providing control selections allowing selectable display of notes in a note set regardless of display size.
 6. (original): The method according to claim 5 further comprising:
formatting said presenting based on a user information goal.

B1
7. (original): The method according to claim 1 wherein said source content comprises HTML multimedia content.

8. (original): The method according to claim 1 further comprising:
providing folder control indications to allow a user to select presentation from multiple available note sets.

9. (original): The method according to claim 1 further comprising:
applying a set of parsing rules in an automatic parser for extracting notes from said source content.

10. (original): The method according to claim 9 wherein said parsing rules includes rules that identify key sentences from sentence structure and punctuation.

11. (original): The method according to claim 9 wherein said parsing rules includes rules that identify important names or phrases by reference to a database.

12. (original): The method according to claim 9 wherein said parsing rules further comprise rules that identify principal material in said content.

13. (original): The method according to claim 1 further comprising:
identifying a classification for said source content; and
using said classification in determining said one or more categories.

14. (original): The method according to claim 9 further comprising:
identifying a classification for said source content; and
using said classification in selecting parsing rules to apply to said source content.

15. (original): The method according to claim 13 wherein said identifying a classification is performed manually.

16. (original): The method according to claim 1 further comprising:
accepting user search criteria associated with one or more of said categories; and
locating a document based on finding said search criteria in said one or more categories.
